

# HydrauCalc

2020b Release

[www.hydraucalc.com](http://www.hydraucalc.com)

## APPLICATION DESCRIPTION

## APPLICATION DESCRIPTION

HydrauCalc is a software application that allows accurate modeling and calculating of stabilized flows in piping elements as straight pipes, bends, changes of cross-section, tees, valves, orifices and more.

HydrauCalc is particularly suitable for pre-projects because it allows to estimate quickly the pressure losses of the components of a hydraulic installation, and thus to specify the characteristics of the pumps.

Friction Loss is calculated using the Darcy-Weisbach method, which provides accurate results for non-compressible fluids (liquids). This method also provides satisfactory results of reasonable accuracy for compressible fluids (gases) when the flow velocity is not very high.

HydrauCalc is mainly based on well-known and respected references in the field of fluid flow and pressure drop calculation.

## THE REFERENCES

## MAINLY REFERENCES

- [1] Handbook of Hydraulic Resistance, I.E. Idelchik
- [2] Internal Flow System, D.S. Miller

## THE GRAPHICAL USER INTERFACE

# GRAPHICAL USER INTERFACE

HydraulCalc - © François Corre 2017-2020

The graphical user interface is available in English, French or Spanish.

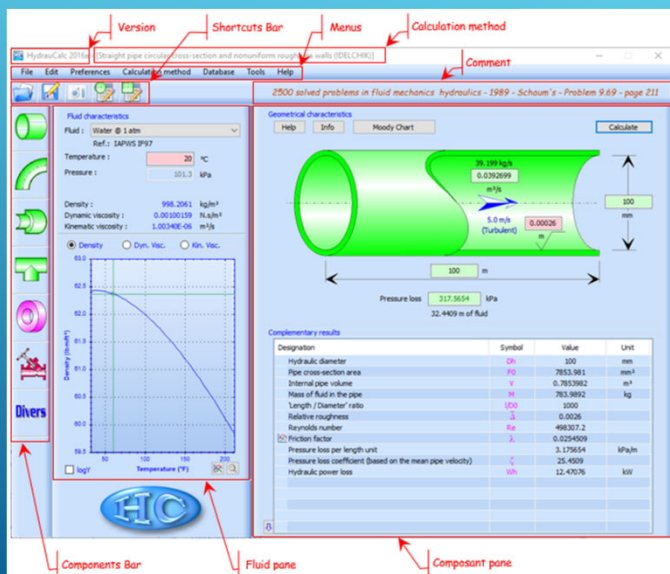

From this interface, the user selects the type of component he wants to calculate and the fluid carried in this component. It also provides the necessary input data (fluid and flow characteristics and component geometry).

This interface is intuitive and very easy-to-use.

7

14/11/2020

# GRAPHICAL INTERFACE STRUCTURE

HydraulCalc - © François Corre 2017-2020

The graphical interface is structured in four main parts:

- ❑ The components bar
- ❑ The fluid pane
- ❑ The component pane
- ❑ The upper part which includes:
  - ❑ The information about release and calculation method chosen
  - ❑ Menus and shortcuts bar
  - ❑ The display area for a possible comment

8

14/11/2020

## COMPONENTS BAR

The vertical components bar makes it possible to select a family of components (straight pipes, bends, changes of cross-section, tees, pipeline entrances and discharges, restriction and measurement orifices, valves, ...)

Selecting a family displays the available components for that family in one or more horizontal bars.

The shaded components are under development and will be available in a future release.

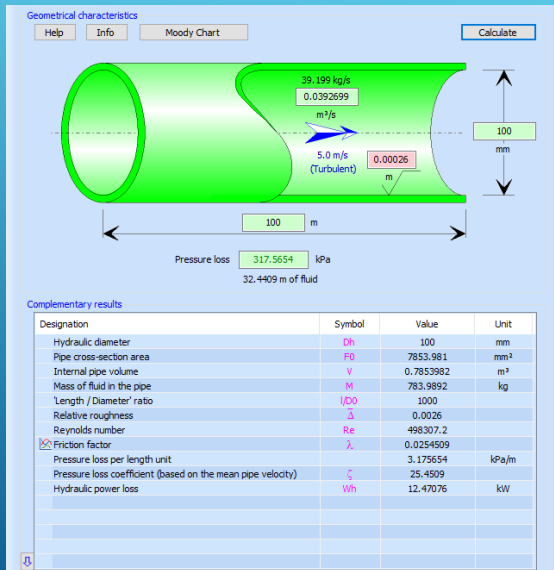

## FLUID PANE

The fluid pane mainly allows:

- ❑ Select the fluid
- ❑ Set the fluid according to the selected fluid type (temperature, pressure, salinity, quality, humidity, ...)
- ❑ Visualize the characteristics of the fluid (density, dynamic and kinematic viscosity)
- ❑ Visualize the evolution of the characteristics according to the temperature or the pressure (according to the type of selected fluid)

# COMPONENT PANE

HydraulCalc - © François Corre 2017-2020

The component pane allows you to:

- Define the geometry of the component according to the selected component type (inside diameter, length, roughness, ...)
- Define flow (volume flow rate)
- Execute the calculation of the component
- Visualize the results
- Display the Moody diagram corresponding to the calculation with the calculated point (case of friction loss)
- Access information about the component:
  - Help (technical documentation of the component)
  - Info (information on the use of the component)
  - Other eventually

11

14/11/2020

# COMPLEMENTARY RESULTS

When, in the complementary results, the variable is preceded by the symbol , a simple click on this variable shows the evolution graph of the variable with the calculated point.

Example :

Designation	Symbol	Value	Unit
Pipe cross-section area	$A$	7853.981	mm <sup>2</sup>
Orifice cross-section area	$A_o$	962.1127	mm <sup>2</sup>
Diameters ratio (Do/d)	$\beta$	0.35	
Cross-sections area ratio	$A_o/A$	0.1225	
Thickness to orifice diameter ratio	$t/Do$	0.2	
Pipe Reynolds number	$NR_e$	498307.2	
Orifice Reynolds number	$NR_{eO}$	1423735	
Velocity in vena contracta	$V_c$	65.43075	m/s
Jet velocity ratio (Equation 13.4)	$\lambda$	1.603054	
Coefficient Cth (Equation 13.14)	$C_{th}$	0.9763061	
Coefficient of local resistance (Equation 13.13)	$K_o$	2.34488	
Pressure loss coefficient (based on the mean pipe velocity)	$K$	156.2602	
Hydraulic power loss	$Wh$	76.56641	kW

12

HydraulCalc - © François Corre 2017-2020

14/11/2020

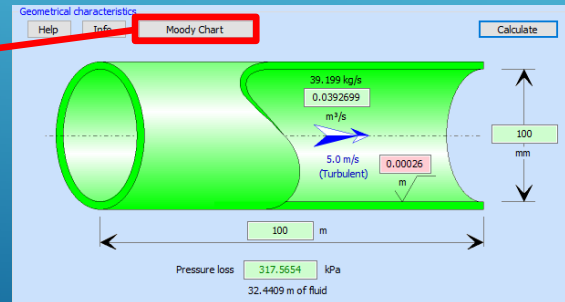

# MOODY DIAGRAM

HydrauCalc - © François Corre 2017-2020

When the component is subjected to friction, the Moody diagram can be consulted to observe the operating point (as well as the flow velocity profile).

Example of a straight pipe:

13

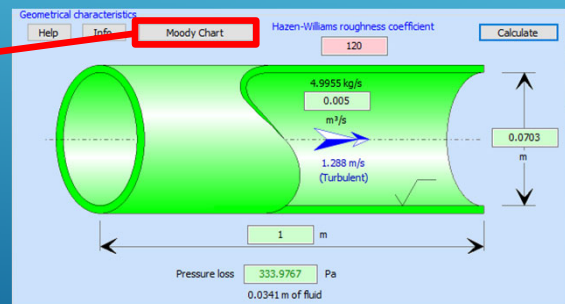

14/11/2020

# MOODY DIAGRAM AND HAZEN-WILLIAMS FORMULA

HydrauCalc - © François Corre 2017-2020

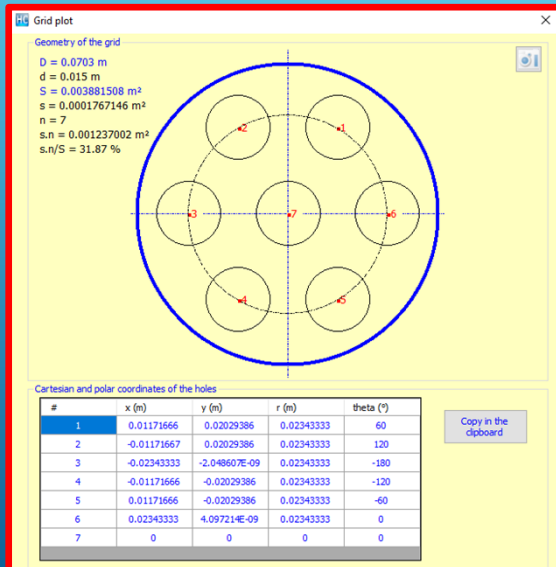

For the "Hazen-Williams" calculation method for circular cross-section straight pipes, the Moody diagram shows the relationship between the roughness coefficient of the Hazen-Williams formula and the friction coefficient of Darcy. The diagram also shows the limits of applicability of the Hazen-Williams formula.

14

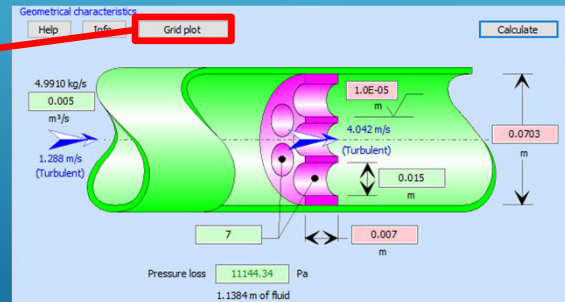

14/11/2020

# GRID PLOT

For "Grid" components (perforated plate), the application provides a grid plot with the coordinates of each hole.

Example of a perforated plate plot:

# THE COMPONENTS

## STRAIGHT PIPES

Circular cross-section

Rectangular cross-section

Triangular cross-section

Annular cross-section

HydrauCalc - © François Corre 2017-2020

### The proposed calculation methods:

- IDELCHIK
  - Uniform roughness walls (Nikuradze equation)
  - Nonuniform roughness walls (Colebrook-White equation)
  - Smooth roughness walls (Filonenko and Althsul equation)
  - Explicit Darcy friction factor
- MILLER
  - Roughness walls (Swamee-Jain equation)
  - Explicit Darcy friction factor
- HAZEN-WILLIAMS (only circular cross-section)
  - Roughness walls (Hazen-Williams equation)

### The proposed calculations:

- Pressure loss
- Volume flow rate
- Length of pipe
- Inside diameter (circular cross-section)
- Height or width (rectangular cross-section)
- Height or base (triangular cross-section)

17

14/11/2020

## BENDS

Smooth bend with circular cross-section

Miter bend with circular cross-section

Smooth bend with rectangular cross-section

Miter bend with rectangular cross-section

HydrauCalc - © François Corre 2017-2020

### The proposed calculation methods:

- IDELCHIK
- MILLER
- CRANE
- Pipe Flow Guide

### The proposed calculations:

- Pressure loss
- Volume flow rate

18

11/14/2020

## BENDS

Composite bend 90° with circular cross-section (4 x 22.5°)

Composite bend 90° with circular cross-section (3 x 30°)

Composite bend 90° with circular cross-section (2 x 45°)

Helical tube

HydrauCalc - © François Corre 2017-2020

The proposed calculation methods:

- ☐ IDELCHIK
- ☐ MILLER
- ☐ CRANE
- ☐ Pipe Flow Guide

The proposed calculations:

- ☐ Pressure loss
- ☐ Volume flow rate

19

11/14/2020

## CHANGES OF CROSS-SECTION

Sudden expansion

Sudden contraction sharp

Sudden contraction rounded

Sudden contraction bevelled

Gradual expansion

# PUMP QUICK DESIGN

New R2020b

Suction lift operation  
Tank with pipe ending below the fluid level

Suction lift operation  
Free flow from the pipe ending above the water level

Suction head operation  
Tank with pipe ending below the fluid level

Suction head operation  
Free flow from the pipe ending above the water level

HydrauCalc - © François Corre 2017-2020

The proposed calculation method:

- KSB Manufacturer

The proposed calculations:

- Total Dynamic Head (TDH)
- Net Positive Suction Head available (NPSH<sub>a</sub>)
- Pressure loss in suction and discharge lines
- Pressures at the pump flanges

31

14/11/2020

# THE MEASURE UNITS

HydrauCalc - © François Corre 2017-2020

32

14/11/2020

# UNIT SYSTEM SELECTION

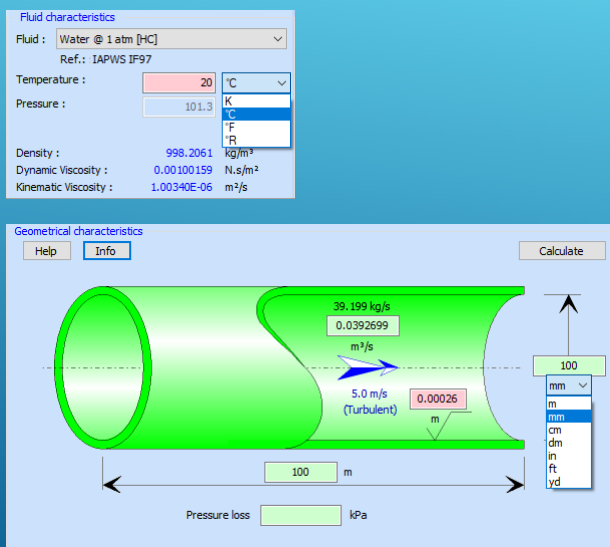

Units can be selected:

- individually
- by unit systems

The user can define his own systems of units (within the limit of three systems)

# UNITS MODIFICATION

The application has a dynamic unit conversion engine.

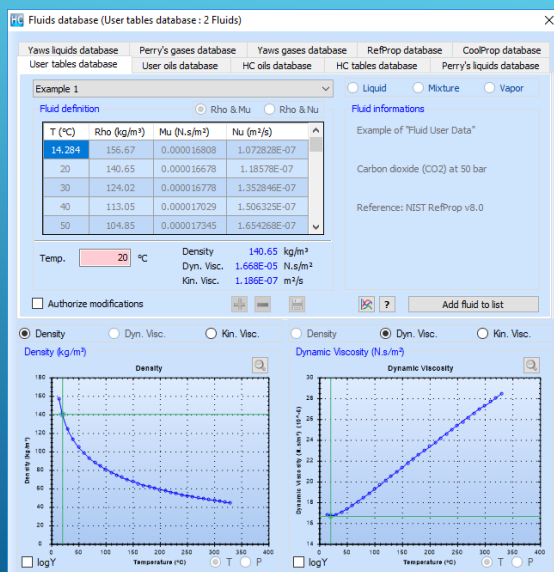

The units displayed in the Fluid Pane and Component Data Panes can be changed by simply clicking on the unit displayed.

After selecting a new unit, the value entered in the input box is automatically converted to the new unit.

The results will be displayed in the current units.

# THE DATABASES

## DATABASE - FLUIDS

HydrauCalc has a fluid characteristics database consisting of several hundred fluids based on recognized references:

- Perry's Handbook
- Oil products
- Yaws Handbook
- Coolprop
- Refprop (coming soon ...)

The user can also define his own fluids in the form of point tables as a function of temperature.

# DATABASE - PIPINGS

**Tables of Nominal Diameters**

Aluminum Pipes	Cast Iron Pipes	Black and Galvanized Steel Pipes	User database
Steel Pipes	Stainless Steel Pipes	Copper Pipes and Tubes	PVC Plastic Pipes

Steel Pipes - EN 10216 - Serie 1

☐ Convert to inch

Back

HydrauCalc has a database defining the diameters of the main pipe standards.

- Steel piping
- Stainless steel piping
- Copper piping
- PVC piping
- Aluminium piping
- Cast iron piping
- Black and galvanized steel piping

The user can also add his own diameter tables.

37

14/11/2020

## DATABASE - WALL ROUGHNESS'S

[illegible]

HydrauCalc has a database of values of absolute roughness of pipe wall from recognized references:

- MILLER
- ISO 5167-1 2003
- Fluid Mechanics - F. White
- IDELCHIK
- Pipe Flow Guide

38

14/11/2020

## DATABASE - ROUGHNESS COEFFICIENT

Type of tubes	Coefficient
cast, plain	100
cast iron, old, unlined	40-120
cast iron (10 years old)	107-113
cast iron (20 years old)	89-100
cast iron (30 years old)	75-90
cast iron (40 years old)	64-83
cast iron, tar (asphalt) coated	100
cast iron, cement lined	140
cast iron, bituminous lined	140
cast iron, bitumastic	140-150
cast iron, sea-coated	100
Ductile Iron Pipe (DIP)	140
Ductile Iron, cement lined	120
galvanized, plain	120
wrought, plain	100

HydrauCalc has a database of values of Hazen-Williams roughness coefficient from:

- Hydraulic Tables by GARDNER S. WILLIAMS and ALLEN HAZEN - 2nd Ed. (1914)

## THE TOOLS

## TOOL - CALCULATOR FOR CIRCULAR CROSS-SECTIONS

General Head Drop Formulas  
for Steady State and Incompressible Fluid

Formulation

$$\Delta P = 1/2 \cdot \zeta \cdot \rho \cdot V^2$$

$$\zeta = \lambda \cdot L / d$$

$$Q_v = V \cdot S$$

$$S = \pi \cdot d^2 / 4$$

$$Q_m = \rho \cdot Q_v$$

$$Re = V \cdot d / \nu$$

$$Av = Q_v \cdot (\rho / \Delta P)^{0.5}$$

$$Cv = 41650 \cdot Av$$

$$Kv = 36023 \cdot Av$$

$$Cv = 1.15620 \cdot Kv$$

$$\zeta = 2 \cdot S^2 / Av^2$$

$$\Delta h = \Delta P / (\rho \cdot g)$$

$$Wh = \Delta P \cdot Q_v$$

$$\nu = \mu / \rho$$

Numerical application

☐  $\Delta P$  = 1699.584 lbf/ft<sup>2</sup>

☐  $\zeta$  = 20.85395

☐  $\lambda$  = 0.01737829

☒  $L$  = 200 ft

☒  $V$  = 9.17 ft/s

☐  $Q_v$  = 0.2000584 ft<sup>3</sup>/s

☒  $d$  = 2 in

☐  $S$  = 3.141593 in<sup>2</sup>

☐  $Q_m$  = 5.659446 kg/s

☐  $Re$  = 126532.3

☐  $Av$  = 0.006276798 m<sup>3</sup>

☐  $Cv$  = 26.14297 USG/min

☐  $Kv$  = 22.61094 m<sup>3</sup>/h

☐  $\Delta h$  = 27.25155 ft of fluid

☒  $Wh$  = 461 W

 Check the input data

Reset

The application allows, from known input data and for circular cross-sections, to automatically calculate those that can be deduced.

It is thus possible to determine the volume flow rate corresponding, for example, to an imposed mean velocity, so as to inform the input data of the components.

## TOOL - CALCULATOR FOR RECTANGULAR CROSS-SECTIONS

General Head Drop Formulas  
for Steady State and Incompressible Fluid

Formulation

$$\Delta P = 1/2 \cdot \zeta \cdot \rho \cdot V^2$$

$$\zeta = \lambda \cdot L / dh$$

$$Q_v = V \cdot S$$

$$S = a \cdot b$$

$$P = 2 \cdot (a + b)$$

$$dh = 4 \cdot S / P$$

$$Q_m = \rho \cdot Q_v$$

$$Re = V \cdot dh / \nu$$

$$Av = Q_v \cdot (\rho / \Delta P)$$

$$Cv = 41650 \cdot Av$$

$$Kv = 36023 \cdot Av$$

$$Cv = 1.15620 \cdot Kv$$

$$\zeta = 2 \cdot S^2 / Av^2$$

$$\Delta h = \Delta P / (\rho \cdot g)$$

$$Wh = \Delta P \cdot Q_v$$

$$\nu = \mu / \rho$$

Numerical application

☐  $\Delta P$  = 23.38326 Pa

☐  $\zeta$  = 0.8365216

☐  $\lambda$  = 0.02048625

☒  $L$  = 7 m

☐  $V$  = 6.985055 m/s

☐  $Q_v$  = 0.2095516 m<sup>3</sup>/s

☒  $a$  = 15 cm

☒  $b$  = 20 cm

☐  $P$  = 69.99998 cm

☐  $S$  = 300 cm<sup>2</sup>

☐  $dh$  = 17.14286 cm

☐  $Q_m$  = 0.2401094 kg/s

☒  $Re$  = 72490

☐  $Av$  = 0.04638713 m<sup>3</sup>

☐  $Cv$  = 1932.032 USG/min

☐  $Kv$  = 1671.006 m<sup>3</sup>/h

☐  $\Delta h$  = 2.080971 m of fluid

☒  $Wh$  = 4.9 W

 Check the input data

Reset

The application also makes it possible, from known input data and for rectangular cross-sections, to calculate those that can be deduced from it.

It is thus possible to determine the volume flow rate corresponding, for example, to an imposed Reynolds number, so as to inform the input data of the components.

## TOOL - UNITS CONVERSION

14/11/2020

## TOOL - ESTIMATE PRESSURE LOSS COEFFICIENT IN LAMINAR FLOW

HydrauCalc - © François Corre 2017-2020

The application has a tool making it possible to obtain an estimate of the coefficient of pressure loss in the laminar flow regime, if the coefficient of pressure loss in the turbulent flow regime is known.

This method only applies to minor pressure losses (pipe fittings, valves, etc.) and is based on the following reference book:

- Internal Flow System, D.S. Miller

44

14/11/2020

## TOOL - MOODY DIAGRAM

HydrauCalc - © François Corre 2017-2020

The application has a tool to calculate the coefficient of friction from more than 40 other formulations published by recognized scientists. The curves of iso-values of relative roughness are plotted in a Moody diagram and the calculated point is presented.

The velocity profile of the flow corresponding to the calculation point is also plotted in a pipe of same hydraulic diameter as that of the component.

45

14/11/2020

## TOOL - MOODY DIAGRAM (FOLLOWING)

HydrauCalc - © François Corre 2017-2020

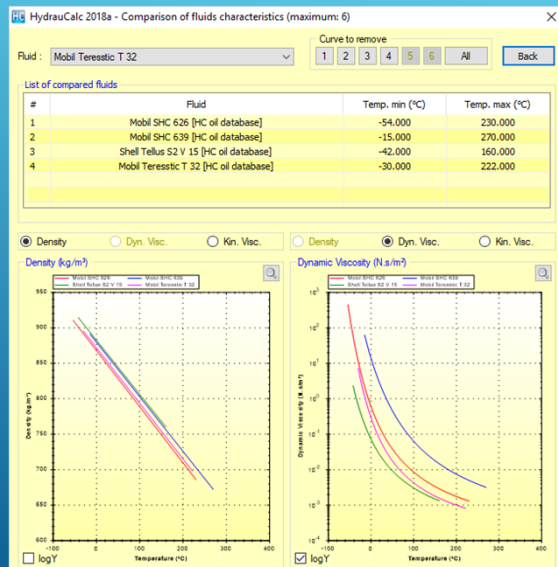

This tool also makes it possible to compare two different formulations for determining the Darcy friction coefficient.

The relative difference found at the calculation point is calculated and displayed on the diagram.

46

14/11/2020

## TOOL - FLUID COMPARATOR

HydraulCalc - © François Corre 2017-2020

The application has a tool to compare the characteristics of the fluids integrated in the application or defined by the user (density, dynamic viscosity and kinematic viscosity).

47

14/11/2020

## THE CALCULATION REPORT

HydraulCalc - © François Corre 2017-2020

48

14/11/2020

# CALCULATION REPORT

To include a calculation result in a document, it is possible to copy the window using the button  and paste it into the document.

The screenshot contains all the data used for the calculation and the results:

- in the title bar:
  - the release of the application,
  - the type of component calculated and the calculation method used,
- in the fluid pane:
  - the characteristics of the fluid used,
- in the component pane:
  - the input data of the component,
  - the desired main result (value in green colour),
  - the additional results from the calculation.

Exporting the main data and results to a spreadsheet allows you to perform additional calculations such as:

- Calculation of the total pressure loss of the circuit by summing the pressure losses of each component.
- Search for the flow circulating in the circuit from the sum of the pressure loss coefficients and using the solver integrated into the spreadsheet.

# THE ASSURANCE QUALITY

## TECHNICAL DOCUMENTATION

In general, each component has several calculation methods that come from different reference works. For all components, each calculation method is detailed in a technical document including:

- A description of the method used
- The mathematical formulation of the model
- The nomenclature used for the equations
- The range of the formulation
- An example of an application
- The bibliographic reference (s) used for modelling

## COMPONENTS MODEL VALIDATION

HydrauCalc comes with a document that provides a comparison of software results with a series of examples published in well-known and respected references. Examples of hydraulic analysis include calculations of flow, pressure drop and pipe sizing for compressible and incompressible fluids.

The results obtained by the HydrauCalc application are very close to the published results.

At each new software release, a series of tests is performed to check the non-regression of the software features.

## THE ROAD MAP

# ROAD MAP

Next release (2021a release):

- Add new components.
- Creation of an Excel add-in for performing pressure loss calculations in an Excel spreadsheet.
- Development of a .NET class library (API) which can be used with different programming languages, including Managed C ++, C #, F #, Visual Basic ...

Following releases:

- Gradual addition of new components.
